

Advanced File Operations Assignment

Overview

In this assignment, you will review organizing files in python. The auto-grader will ensure that your code incorporates the minimum number of function calls described below. You may expand upon your file operations assignment to complete this assignment or you can use the provided template.

Objectives

- Review use of advanced file handling in Python

Requirements

Write a program that utilizes at least three of the options below:

- `shutil.move()` to move a file into a different folder or rename a file.
- `shutil.copy()` to create a copy of a file.
- `shutil.copytree()` to copy a directory and its contents.
- `os.walk()` to loop through folders and files in a directory.
- Write to a .zip file using the `zipfile` module `write` function.
- Extract the contents from a .zip file using the `zipfile` module `extract` function.
