

Chapter 2 Review Assignment

Overview

In this assignment, you will review the material covered in chapter 2 of Automate the Boring Stuff.

Objectives

- Review the use of `if`, `elif`, and `else` statements in Python.
- Review the use of `input()`.
- Review the use of `int()`.
- Enhance ability to solve problems with conditional logic.

Requirements

User Input

Your program should begin by asking the user for 2 integers. These integers will be checked against conditions in the table below.

Program Output

Based on the user's input, your program should print the correct response as indicated in the table below. Notice that you may need to print two responses if the inputs satisfy the perfect square check. Number 1 and Number 2 have been populated with example values.

Number 1	Number 2	Response
3	9	9 is the perfect square of 3.
2	10	2 and 10 are both even.
8	11	8 is even and 11 is odd.
13	256	13 is odd and 256 is even.
39	41	39 and 41 are both odd.
