

Debugging Assignment

Overview

In this assignment, you will review the material covered in chapter 11 of Automate the Boring Stuff. The auto-grader will ensure that your code incorporates **ALL** the requirements described below. You may improve one of your previous assignments to complete the requirements below.

Objectives

- Review how to raise your own Exceptions.
- Review use of the logging module.

Requirements

Write a program that satisfies the following:

- **raise** your own exception in a **try** block and handle it in your **except** block.
 - Do not create a custom exception class, simple raise a predefined exception.
Creating a custom exception class will result in a 0 for manual grading.
- Implement logging with the **logging** module:
 - Include at least two levels of logging.
 - Ensure your logs are written to a log file.
