

File Operations Assignment

Overview

In this assignment, you will review reading and writing to files using python. The auto-grader will ensure that your code incorporates **ALL** of the function calls described below.

Objectives

- Review use of the **pathlib** module.
- Read and write to files using Python.

Requirements

Write a program that utilizes **ALL** of the following functions:

- `is_file()` on a path object.
- `mkdir()` on a path object.
- `glob()` on a path object.
- `open()`
- `write()`
- `read()`

There are no creative constraints. Feel free to explore ideas to achieve the above task.
